

RASILANT TO SHOWCASE CONFERENCE MANAGEMENT SYSTEM AT ALL HID EVENTS

About HID

HID Global is the trusted leader in solutions for the delivery of secure identity to millions of customers around the world. HID Global is focused on creating customer value worldwide with technology-based access solutions, issuance solutions, embedded technology solutions and logistics technology solutions.

Implementation

Rasilant Technologies has introduced its Event Management application using RFID technology for all the HID events held henceforth. Standalone readers at all the partner booths, connected on a network, will read RFID HID cards issued to all delegates. These cards will be given to the delegates at the time of registration with their details entered in the card memory. At every swipe on the respective booths, information regarding the company and its solutions will be directly emailed to the delegate.

This process creates an awareness of the automation technology using HID hardware and also provides the event managers a consolidated, automated report of the attendance list of the delegates.
